Abstract
English is known as a great borrowing language. Among words in the dictionary, roughly 25 percent are native English words, the rest derived from other languages. But how many languages has English borrowed from? The way to find out is to compile a list of words derived from as many different languages as possible.

Borrowing words from other languages has always been one of the important means of replenishing of the English vocabulary. There are many words in English that are of foreign origin. The language from which the loan word was taken into English is called the source of borrowing. Latin borrowings are numerous in English. They constitute about ¼ of the English vocabulary as to historical period of their adoption. Latin borrowings may be divided into 3 groups.
