**Abstract**

In the last few years there has been a sea change in higher education. Student numbers have expanded overwhelmingly and the language of competition, privatization and the market has now arrived on campus, and no one knows quite what will happen next. This book's focus is an in-depth comparison, based on interviews with staff and students, of an ex-polytechnic in the inner city and a "new" 1960s-built university in the home counties. The interviews form the basis for a wide-ranging review and analysis of the current state of higher education addressing issues such as: what kinds of knowledge are useful in a technological society, the role of education in the economy, the distance between the rhetoric of democratic access to education and the experiences of many students, and the dangers of further polarization in the higher education sector. The book is full of information and insight, and should be of interest to anyone trying to understand Britain's changing universities.

**Item Type:** Book

**Uncontrolled Keywords:** higher education, student fees, universities, 1990s

**Subjects:**
- L Education > LB Theory and practice of education > LB2300 Higher Education

**Pre-2014 Departments:** School of Education

While the educational attainment of all races increased during the 1990s, with the gap between African Americans and non-Hispanic whites decreasing, differences between the races remain, especially among those with a bachelor's degree or higher. Asian Americans had the highest educational attainment of any race, followed by whites who had a higher percentage of high school graduates but a lower percentage of college graduates. Most organizations require higher education. And after the termination of 11 classes there are questions where to act, what direction to choose and what form of training is better. Almost everyone knows that a master's degree is a higher level of education. But what is the difference between a bachelor's degree and a specialty? It is worthwhile to understand each of the forms of learning in more detail. Bachelor's program. The average term of study is 4 years. However, in some universities (and sometimes in specific cases - for example, after obtaining a junior specialist), the ... It is worth noting that the specialists will still be more demanded in the labor market for a long time than graduated from the bachelor's degree. Higher education (also called post-secondary education, third-level or tertiary education) is an optional final stage of formal learning that occurs after completion of secondary education. Often delivered at universities, academies, colleges, seminaries, conservatories, and institutes of technology, higher education is also available through certain college-level institutions, including vocational schools, trade schools, and other career colleges that award academic degrees or professional
